# Internet challenges – fixed bandwidth

## WIRED TECHNOLOGIES - THE BIG PICTURE

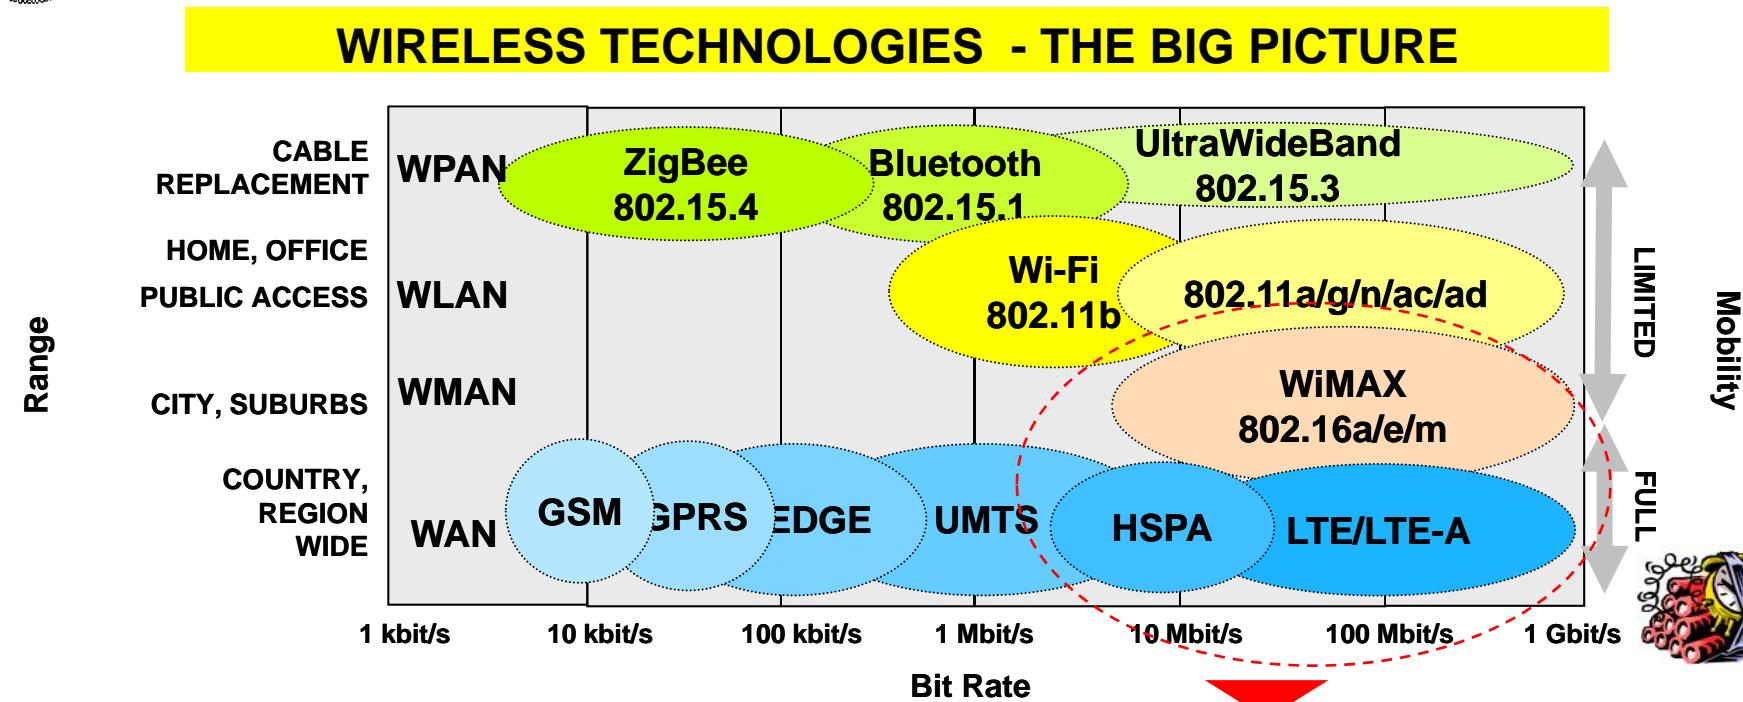

Traffic growth challenges networking capabilities  
Are networks future-proof?

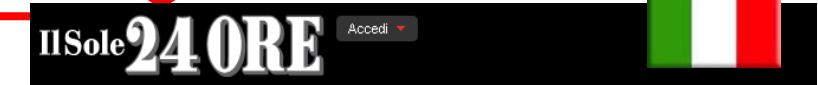

Source: Cisco, University of Oxford and University of Oviedo, 2009

# Internet challenges - mobile bandwidth

- Mobile networks are not designed for emerging traffic loads
- Deep and costly network transformations needed for base stations backhauling
- Spectrum is a scarce resource: need to increase the amount of frequencies available (e.g. use the Digital Dividend), as well as to constantly improve efficiency

«Troppi smartphone, rete a rischio»

Liberare le frequenze prima di dover gridare all'emergenza. È il primo avvertimento lanciato dal presidente dell'Authority per le comunicazioni Corrado Calabò sul rischio di congestionsamento della rete di telefonia mobile, sovraccaricata dal boom degli smartphone e delle chiavette. La diffusione rapidissima dei telefoni con i quali ci si collega a internet, si inviano e-mail e si scaricano allegati potrebbe in futuro mettere alla prova la tenuta dell'infrastruttura cellulare, spiega il garante nella relazione annuale letta in Parlamento. Si scatenano subito i distinguo, con Telecom Italia che getta acqua sul fuoco spiegando che i rischi per ora non ce ne sono.

# Potenzialità e limiti della Rete

- **Potenzialità**

- Social Networks
- Semantic Web

- Ambient intelligence
- ....

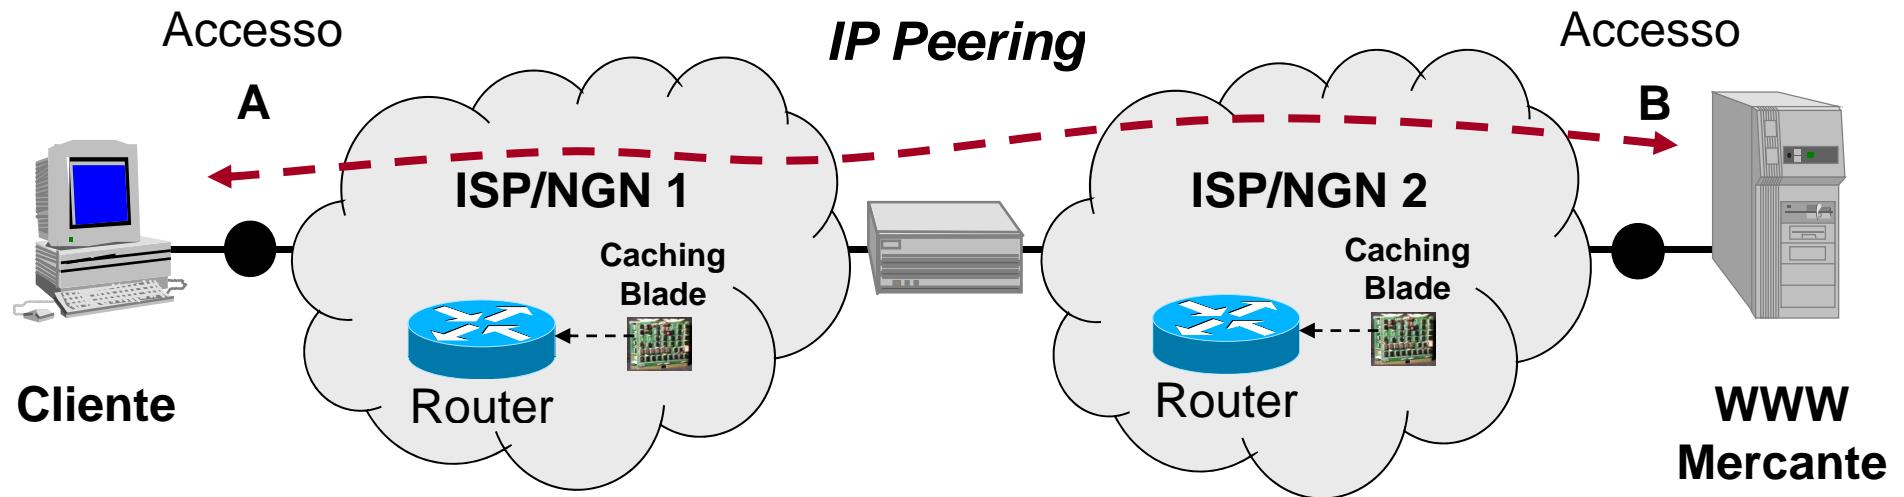

- **Limiti**

- Privacy
- Security, Frauds,
- Intellectual Property
- Soliciting Minors
- ....

# Network Neutrality Scenario

*Scenario Multiple Carriers*

**e2e-QoS: end-to-end Quality of Service?**

**Net neutrality: all bits are created equal!**

# Net Neutrality Issues

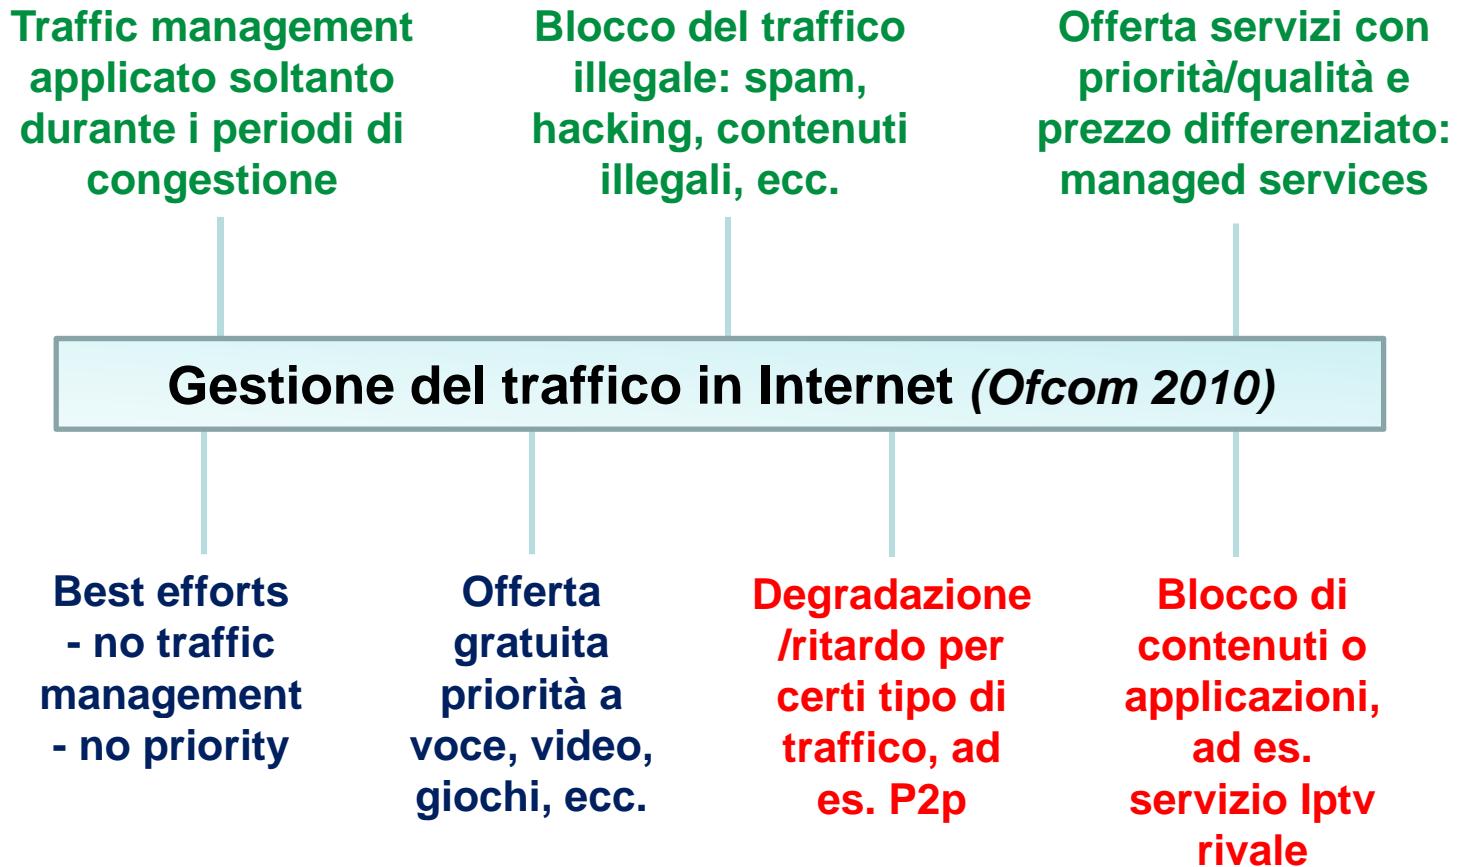

| traffic handling tools      |                                                |
|-----------------------------|------------------------------------------------|
| <b>traffic capping</b>      | data, time                                     |
| <b>traffic shaping</b>      | throughput, data, delay                        |
| <b>traffic blocking</b>     | packets, applications                          |
| traffic handling objectives |                                                |
| <b>traffic management</b>   | routing, congestion, fairness, malicious users |
| <b>managed services</b>     | QoS differentiation                            |
| <b>pricing policies</b>     | flat, data, time, application, QoS             |

all bits of traffic are created equal, but:

1. **Traffic management** must be applied to maintain control of network congestion and outages, and to guarantee fairness, security and privacy to the users
2. **Managed services** allow flexible/agile market propositions, and stimulate innovation, competition and investments
3. **Flexible pricing** stimulates market innovation, competition and investments
